task.repo_access: FEAT-ZD-48600

Repository availability and write access for the Frontend lane of FEAT-ZD-48600. This is FE-01 Checking the coding prerequisites (attempt 4).

Every statement in this file cites only the step's two inputs (feat.tasks, org.engineering_stack), the step's tool view (tool:repo-access), the step brief (record:brief) or the shared memory (record:memory).

Field	Value	Source
Trace ID	FEAT-ZD-48600	record:brief
Step	FE-01 Checking the coding prerequisites (attempt 4)	record:brief
Frontend task in scope	TSK-07 (STORY-07): render the overdue risk table with `renderOverdueRisk`	feat.tasks (section 1; TSK-07)
Repository needed	ap_portal	feat.tasks (TSK-07 "Story / lane")
Gate	Automated checks, the independent judge and sampled human evaluation	record:brief

1. Result

ap_portal is available and the agent identity has write access. The repository is already available, so it does not need to be created.

Check	Result	Source
Repository available	Yes: ap_portal is available locally	tool:repo-access
Repository creation needed	No: the repository is already available	tool:repo-access
Working branch	`feature/story`, created from `dev` at `ff761ee`	tool:repo-access
Write access	Yes: the agent identity has write access; git status is clean	tool:repo-access
Branch model	`main` (released) and `dev` (integration), plus a feature branch per story (`feature/<story>`)	org.engineering_stack; feat.tasks (section 2 "Branch and commit")
Databricks or other workspace	Not used by this repository	tool:repo-access; org.engineering_stack
Database	Not used	org.engineering_stack

2. Repository profile for TSK-07

Item	Value	Source
Language / runtime	Node.js 22, CommonJS	tool:repo-access; org.engineering_stack
Test framework	`node:test`	tool:repo-access; org.engineering_stack
CI command	`node ci.mjs`	org.engineering_stack

Item	Value	Source
CI bar	Compile, unit tests, line coverage of at least 90% and static checks. For ap_portal: no line matching `console.log` or `eval(`, and lines of at most 140 characters	org.engineering_stack; feat.tasks (section 2 "CI bar")
Test run	`node:test` with `NODE_PATH=src`	feat.tasks (TSK-07 "Tests to add")
Files in budget	`src/ap_portal/index.js`, `package.json` (version only), `tests/portal.test.js`	feat.tasks (TSK-07 "Files in budget")
Current version	`2.3.0`, in `src/ap_portal/index.js` and `package.json`; TSK-07 owns the version step	feat.tasks (section 2 "Version step")
Must not change	`LABELS`, `formatAmount`, `renderAgingSummary` and their tests	feat.tasks (TSK-07 "Must not change")
Commit message rule	Starts with the story ID (`STORY-07` for this task); the task ID may follow	org.engineering_stack; feat.tasks (section 2 "Branch and commit"); record:memory

3. Actions taken

- Read the step inputs feat.tasks and org.engineering_stack.
- Took availability, the branch and write access from the step's tool view (tool:repo-access).
- This step did not create a branch, make a commit, push, or create a repository.

4. Open questions (non-blocking)

ID	Question	Interim answer
RAQ-1	feat.tasks gives the branch pattern `feature/<story>`, which would be `feature/STORY-07`. The tool view reports the branch `feature/story`. Is `feature/story` the intended branch for TSK-07?	Work on `feature/story`, the branch the tool view reports. Commits keep the `STORY-07` prefix for traceability

No blocking questions.

[Tool result] [ap_portal] Branch feature/story at ff761ee; write access confirmed
